Size:

How does it move:

This is what my pond creature does to survive:

This is what my pond creature eats:

This is what eats my pond creature:

My pond creature is called a:

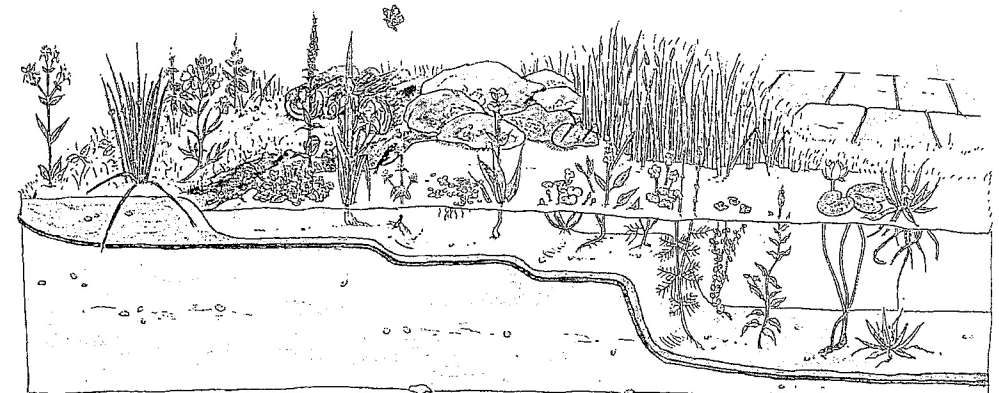

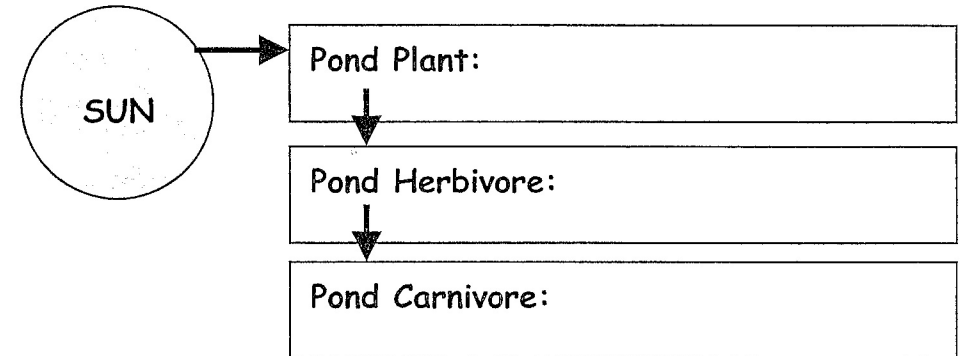

My pond creature looks like this:

Now have a go at creating a food chain, by filling in the gaps below.

All food chains start with the sun and then a plant.  
An example is:

Sun → Plant → Herbivore (eats plants) → Carnivore 1 (eats animals) → Carnivore 2

Sun → Algae → Water flea → Diving beetle → Dragonfly nymph
